

WIDE AREA PROGRAM DISTRIBUTION AND GAME INFORMATION COMMUNICATION SYSTEM

ABSTRACT OF THE DISCLOSURE

5 Methods and apparatus are described for distributing gaming applications to a
plurality of gaming sites located in a plurality of regulatory regions via a wide area network.
Each regulatory region has a regulatory scheme associated therewith. A plurality of gaming
applications are stored on at least one central server. A subset of the gaming applications are
distributed from the at least one central server to at least one of the gaming sites located in
10 one of regulatory regions via the wide area network, the subset of gaming applications being
determined according to the associated regulatory scheme.
